

Full-stack software engineer with 5+ years of experience delivering scalable, user-facing solutions. Recognized for strong technical and architectural design, mentorship ability, and leadership of cross-functional initiatives. Skilled at translating ambiguous requests into clear, user-centered solutions by uncovering root issues, defining success metrics, and aligning outcomes with business needs.

WORK EXPERIENCE

Alarm.com - Denver, CO

Senior Software Engineer | Apr 2026 - Present, *Software Engineer II* | June 2022 - Mar 2026

- Owned the design, development, and roll-out of a business-critical internal tool handling millions of live production accounts with a focus on performance and reliability. Directly unblocked over a dozen key projects and business partner opportunities.
- Developed and deployed agentic AI tooling for company-wide use, including custom MCP skills and Jira-integrated agents that autonomously triage and resolve backlog tickets. Led knowledge shares and training on agentic coding and AI best practices.
- Led initiatives to standardize accessibility testing and documentation processes, improving workflows, cross-department productivity, and overall UX posture.
- Mentored interns and junior developers, and refined team onboarding processes to accelerate integration of new hires and reduce time-to-contribution.

Epic Systems - Madison, WI

Software Developer | Aug 2020 - Jan 2022

- Rapidly delivered new features to live users during the COVID-19 pandemic. Coordinated with various stakeholders to enhance vaccine information capture-and-reconciliation workflows within the MyChart COVID-19 feature, a high-traffic feature available to millions of users.
- Migrated internal web app from Angular 1.x to Angular 12 and established CI/CD pipeline via GitLab to improve code maintainability and accelerate feature delivery timelines.
- Served as lead engineer and primary business partner contact for a novel telehealth self-triage feature, owning full-stack development and project management. Designed and implemented a dynamic decision-tree traversal engine for symptom-based care routing.
- Refactored core workflows around patient data capture, wrote a comprehensive new testing suite, and created new internal documentation to facilitate knowledge-sharing.

TECHNICAL SKILLS & NOTABLE PROJECTS

- Languages & Frameworks** | TypeScript, React, Ember, C#, Python, SQL, Git, HTML, CSS
- AI & Tooling** | Claude API, GitHub API, MCP & Plugin Development, Agentic Workflows, Prompt Engineering
- HYPR-VISR** | Personal to-do list and note-taking app built in React and Tauri (Rust) providing local-first data storage and available on multiple platforms.
- Vibecheck** | React web app that leverages the Spotify Web API to allow users to visualize and drill-down on key audio features for any artist, album, or playlist.
- Cloudinator** | Python cloud automation platform that allows developers to deploy and manage Linux-based applications. Senior Design Project at NCSU mentored by Michael DeHaan (Ansible co-founder).
- Co-Author**, "Structuring a Comprehensive Software Security Course Around the OWASP Application Security Verification Standard", ICSE-JSEET 2021.

EDUCATION

Bachelor of Science, Computer Science Major and Statistics Minor

North Carolina State University | Raleigh, NC | Summa Cum Laude | University Honors Program

May 2020
